# 1 Introduction

This document describes the product scope for LeadFlexUp, a marketing automation platform built for small and medium-sized businesses. It is written for business stakeholders, product owners, and decision-makers who want a clear picture of what LeadFlexUp does, who it is for, and what it will deliver — without wading through technical specifications.

LeadFlexUp was designed around one observation: most small businesses already know they need better marketing tools. What stops them is not motivation — it is the sheer effort of getting started. Setting up a CRM, building email sequences, creating lead forms, and drafting social media content each requires its own tool, its own learning curve, and often its own consultant. By the time everything is connected, weeks have passed and the initial momentum is gone.

LeadFlexUp removes that barrier entirely. A business owner visits the platform, enters their website address, and within sixty seconds has a complete marketing system ready to use. No configuration. No blank dashboards. No instructions to read before anything works.

## What This Document Covers

The sections that follow walk through the product from the perspective of its users — what they see, what the platform does for them, and how the different parts work together. This is a scope document, not a technical specification. It covers the product's purpose, its structure, the features it includes, and the order in which those features will be built. Architecture, code, and infrastructure details are kept in separate technical documents.

## The Problem LeadFlexUp Solves

| Challenge             | Impact on Business                                                                                                                                         |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Blank canvas syndrome | A business signs up for a marketing tool, finds an empty dashboard, and churns within days before getting any value out of it.                             |
| Disconnected tools    | Most businesses run five to eight separate applications for CRM, email, social media, and analytics. None of them talk to each other without custom setup. |
| High setup cost       | Getting everything connected and running takes weeks of configuration and budget that most small businesses do not have.                                   |
| Missed follow-up      | Leads arrive, sit in a spreadsheet, and receive no response. Opportunities are lost simply because no system was in place to act on them.                  |

## 2 The Core Idea

The defining feature of LeadFlexUp is its onboarding experience. When a new user arrives on the platform for the first time, they see one thing: a single text field asking for their website address. There is no wizard, no questionnaire, and no choice to make. They paste their URL and click a button.

What happens next takes about sixty seconds. The platform visits the user's website, reads its content, identifies the nature of the business — its industry, tone, target audience, and key messages — and uses that information to build a complete marketing setup tailored to that specific business. By the time the loading screen clears, the user has a working system, not a blank starting point.

### What Gets Built in Those Sixty Seconds

- 1 Business Profile** — The platform creates a profile using the business name, description, and branding colours pulled directly from the website.
- 2 Lead Capture Form** — A ready-to-use form is generated with a headline, supporting text, and a call to action. It can be embedded on any website with one line of code.
- 3 CRM Pipeline** — A contact management system is set up with standard stages: New Lead, Contacted, Qualified, Won, and Lost.
- 4 Email Sequences** — A welcome email and a three-step follow-up sequence are written and connected to the lead form automatically.
- 5 Social Media Posts** — Five social media posts are drafted in the business's own tone and style, ready to schedule or edit.
- 6 Content Library** — All generated content is stored in one place where the user can review, adjust, and approve before anything goes live.

#### IMPORTANT

Everything built in the setup phase is editable. The user reviews a preview of the entire system before it goes live. If the tone is slightly off or a detail needs adjusting, they can change it then and there. The goal is to give businesses a strong starting point, not to remove their control.

## 3 How Users Get Started

The entire journey from first visiting LeadFlexUp to having a live marketing system running is designed to take under three minutes. Each step is kept short and purposeful. There are no lengthy forms to fill in and no decisions to make before seeing real value.

| Stage           | What Happens                                                                      |
|-----------------|-----------------------------------------------------------------------------------|
| Landing Page    | The user reads about the product, sees how it works, and decides to sign up.      |
| Sign Up         | Account creation takes one step — email and password, or sign in with Google.     |
| URL Input       | The user pastes their business website address and clicks Launch.                 |
| AI Build        | The platform reads the website and builds the full marketing setup automatically. |
| Review and Edit | The user sees everything that was created and adjusts anything they want.         |
| Choose a Plan   | The user selects the plan that suits their business — Free, Pro, or Business.     |
| Payment         | Payment is completed via a secure checkout. Access is granted immediately.        |
| Dashboard       | The user lands on their live dashboard with all tools active and ready to use.    |

### Subscription Plans

LeadFlexUp offers three plan tiers. The Free plan allows users to explore the platform and test the core setup experience. The Pro plan unlocks the full suite of tools for a single business profile. The Business plan supports multiple business profiles under one account and includes team access controls and advanced reporting. Plan details and pricing are managed separately from this document.

## 4 Platform Structure

LeadFlexUp is organised around two containers: Workspaces and Business Profiles. Understanding this structure makes it straightforward to see how the platform scales from a single owner to a team managing multiple clients or brands.

### Workspaces

A Workspace is the top-level account. When a user signs up, they get one Workspace. Everything they do within LeadFlexUp lives inside that Workspace — their team members, their billing details, and their Business Profiles.

### Business Profiles

Inside a Workspace, a user can create one or more Business Profiles. Each profile represents a distinct business or brand. For example, a user who runs a coffee shop and a consulting firm can manage both from the same account, with each having its own completely separate set of tools, leads, and content.

Every Business Profile gets its own isolated version of all the platform tools. Leads captured through the coffee shop's form do not appear in the consulting firm's CRM. Emails sent for one brand come from that brand's sender address. The two businesses share a login but nothing else.

#### USE CASE

This structure makes LeadFlexUp particularly useful for marketing agencies and consultants who manage marketing on behalf of multiple clients. Each client gets their own profile with fully independent data and branding.

### Data Stored by the Platform

LeadFlexUp stores the information needed to run a business's marketing operations. This includes account and billing information, business profile details such as name and branding, lead contact records and their engagement history, email content and delivery records, social media post drafts, and team member access details. All data is kept separate by Business Profile and is never shared across accounts.

## 5 Managing Your Team

LeadFlexUp includes a built-in system for managing who on a team can see and do what. There are three roles. Each role is designed around the typical responsibilities of that person in a small or medium-sized business.

### The Three Roles

| Role          | What They Can Do                                                                                                                                                                                         |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Administrator | Full access to the entire Workspace. Manages billing, creates and archives Business Profiles, invites and removes team members, and receives daily performance summaries.                                |
| Manager       | Access to one or more Business Profiles as assigned by the Administrator. Can configure tools, review analytics, manage email campaigns, and oversee the CRM. Cannot access billing or account settings. |
| Sales Member  | Access only to the leads and tasks assigned to them. Receives alerts when a lead becomes highly engaged. Cannot send campaigns or access reporting. Focused entirely on acting on warm leads.            |

### Permissions at a Glance

| Permission                      | Administrator | Manager           | Sales Member        |
|---------------------------------|---------------|-------------------|---------------------|
| Invite and manage team members  | Yes           | No                | No                  |
| Create Business Profiles        | Yes           | Yes               | No                  |
| View all Business Profiles      | Yes           | Own profiles only | Assigned leads only |
| Manage billing and subscription | Yes           | No                | No                  |
| Access CRM and all leads        | Yes           | Yes               | Own leads only      |
| Send email campaigns            | Yes           | Yes               | No                  |
| View performance analytics      | Yes           | Business level    | No                  |
| Edit email workflows            | Yes           | Yes               | No                  |
| Receive daily summary reports   | Yes           | Yes               | No                  |
| Receive high-engagement alerts  | Yes           | Yes               | Yes                 |

## 6 Tools Included in the Platform

Every Business Profile inside LeadFlexUp comes with a full set of marketing tools. They are all connected to each other from day one — a lead captured through the form appears automatically in the CRM, triggers the email sequence, and starts accumulating an engagement score without any manual steps. The tools are listed below.

| Tool                   | What It Does                                                                                                                                                                       |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Lead Capture Forms     | A form builder for creating contact forms to place on a business's website. Every submission automatically creates a new contact record in the CRM.                                |
| CRM — Contact Manager  | A visual pipeline showing where each lead stands: New, Contacted, Qualified, Won, or Lost. Includes activity history, notes, and engagement scoring per contact.                   |
| Email Marketing        | A tool for writing and scheduling email campaigns with AI writing assistance. Tracks whether each email was opened, whether links were clicked, and whether the recipient replied. |
| Social Media Scheduler | Plan and schedule posts across social media platforms. AI drafts posts based on the business context so there is always a starting point to work from.                             |
| Digital Business Card  | An automatically generated contact card with the business's details and a QR code. Shareable by link or printed for physical use.                                                  |
| Business Analytics     | A single dashboard showing conversion rates, email performance, pipeline progress, and social media reach. No need to check multiple places.                                       |
| SEO Audit Tool         | Scans the business's website and produces a plain-language checklist of improvements that could help it rank better in search results.                                             |
| Profile and Settings   | Controls the business's branding, connected social accounts, and email sender details. Changes here apply across all tools automatically.                                          |

## 7 How Leads Are Managed Automatically

Once the initial setup is complete, LeadFlexUp handles lead follow-up without requiring any daily intervention. The moment someone fills in a lead form, a sequence of actions begins. The sales team is only brought in when a lead shows strong signs of interest — not every time someone submits a form.

### The Lead Journey

1

**Form Submitted** — A visitor fills in the lead capture form on the business's website.

2

**Contact Created** — A new record appears automatically in the CRM with a starting status of Cold.

3

**Welcome Email Sent** — The first nurture email is delivered to the lead immediately.

4

**Behaviour Tracked** — The platform watches whether the lead opens emails, clicks links, or returns to the website.

5

**Score Updated** — Each action the lead takes increases their score. Inactivity causes it to drop gradually.

6

**Follow-up Emails** — Further emails are sent on days two, four, and seven, adjusted based on engagement.

7

**High-Score Alert** — When a lead's score reaches 75 or above, the assigned Sales Member receives an alert.

8

**Daily Summary** — Each evening, the Administrator and Managers receive a summary of the day's lead activity.

### Lead Scoring Explained

Every lead is assigned a score between zero and one hundred. The score reflects how engaged that person is with the business's content. It goes up when they take positive actions and falls slightly if they go quiet. This gives the sales team a clear, at-a-glance signal of who is worth prioritising.

| Lead Action               | Score Change | Status      |
|---------------------------|--------------|-------------|
| Submits the lead form     | +10 points   | Cold        |
| Opens the welcome email   | +8 points    | Cold        |
| Clicks a link in an email | +15 points   | Warm        |
| Replies to an email       | +20 points   | Warm or Hot |

| Lead Action                       | Score Change      | Status        |
|-----------------------------------|-------------------|---------------|
| Returns to the business's website | +12 points        | Warm          |
| No activity for three days        | –5 points         | Score reduced |
| Score reaches 75 or above         | Sales alert fired | Hot           |

## 8 AI-Assisted Content

LeadFlexUp uses artificial intelligence to generate written content throughout the platform. The key distinction is that this AI is not producing generic marketing text. Because it read the business's website during setup, everything it writes is grounded in that specific business — its industry, its audience, and its way of communicating.

A bakery and an accounting firm will receive completely different content from the same prompt, because the platform understands what those businesses actually do and who they are talking to. The AI produces a first draft; the user always has the final say.

### Where AI Assists Within the Platform

| Where It Appears      | What the AI Produces                                                                                                                                      |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Initial Setup         | When the URL is processed, five social media posts and three email templates are written immediately. These appear in the Content Library on first login. |
| Social Media          | When scheduling a post, the platform drafts copy in the business's tone. The user can edit it, regenerate it, or write their own.                         |
| Email Campaigns       | Subject lines, body copy, and calls to action are drafted for each email. Personalisation fields are suggested based on the contact's name and behaviour. |
| Lead Forms            | The headline, description, and thank-you message for each lead form are generated to match the business's style.                                          |
| Inline Editing        | Any text field in the platform can be selected and rewritten by the AI. Users can ask it to shorten, expand, or change the tone of any passage.           |
| Daily Summary Reports | The end-of-day report sent to Administrators and Managers is written in plain English by the AI, summarising what happened with leads that day.           |

#### AI TRANSPARENCY

The AI used in LeadFlexUp is built on Anthropic's Claude model, selected for its ability to understand context and produce coherent, professional business writing. All content it generates is a starting point. Nothing is published or sent without the user's review and approval.

## 9 Platform Screens at a Glance

The following descriptions cover the four primary screens a user interacts with most. These are not final designs — they represent the intended layout and the information each screen is responsible for communicating.

### URL Input Screen

This is the first screen every new user sees. It contains a single text field and a Launch button. The design is deliberately minimal. There are no menu items, no guidance panels, and no distractions. The intent is for the user to see exactly what they need to do and nothing else.

### Main Dashboard

After setup, the user lands here. The left side of the screen holds the navigation menu. The main area shows four headline numbers: new leads this period, total emails sent, email open rate, and average lead score across all contacts. Below those figures is a chart showing lead activity over the past seven days.

### CRM — Lead Manager

A table view of all contacts, sortable by name, source, score, and current status. Each row shows the lead's name, where they came from, their score as a number with a colour indicator, their status label, and the last action they took. High-scoring leads are visually prominent so sales team members can identify priorities immediately.

### Workspace Overview

Shows all Business Profiles in the account as cards arranged in a grid. Each card displays the business name, total lead count, and whether the profile is currently active or paused. Clicking a card opens that business's full dashboard. A button to add a new Business Profile sits alongside the existing cards.

## 10 Delivery Roadmap

LeadFlexUp will be built and released in four consecutive phases. Each phase ends with a working product that real users can access. The intention is to put the platform in front of paying customers as early as possible and let their feedback shape what gets built next. No phase attempts to build everything before getting real reactions.

### Phase 1 — Foundation

Weeks 1 to 4

The core account system, the URL input experience, and the web scraping and AI profile generation that make the sixty-second setup possible. Payment processing and plan management are also included so that real customers can subscribe from day one.

- User accounts with email and Google sign-in
- URL input screen and web scraping
- AI-generated Business Profile from website content
- Dashboard layout and navigation
- Subscription plans and payment processing

### Phase 2 — Core Tools

Weeks 5 to 10

The main working tools that businesses use daily. By the end of this phase, a user can capture leads, manage them in a pipeline, send emails, and schedule social media posts.

- Lead capture form builder with embed code
- CRM pipeline with lead cards and activity log
- Lead scoring system
- Email workflow builder with three-step sequences
- AI content generation for posts and emails
- Basic analytics dashboard

### Phase 3 — Automation

Weeks 11 to 16

The intelligence layer that makes LeadFlexUp operate without constant attention. Forms trigger CRM entries and email sequences automatically. Scores update in real time. Sales members are alerted when a lead is ready. Managers receive daily summaries.

- Full automation: form submission triggers CRM and email sequence
- Email behaviour tracking — opens, clicks, and replies

- Real-time lead score updates based on actions
- High-engagement alerts to Sales Members
- Automated end-of-day report for Administrators and Managers
- Social media post scheduling with platform connections

## Phase 4 — Scale and Polish

Weeks 17 to 22

Advanced capabilities for teams, agencies, and larger operations. This phase also focuses on the overall quality of the experience — making the platform faster, more polished, and accessible from mobile devices.

- Full team access control with role assignment and audit log
- SEO audit tool for business websites
- Digital business card with QR code
- Public API for external integrations
- White-label options for agencies
- Mobile-optimised experience

### KEY PRINCIPLE

Phase 1 should be shipped to real users before Phase 2 development begins. Feedback from ten paying customers on the sixty-second setup experience is worth more than any amount of internal review. Build, test with real people, then continue.
